

How to connect Trial BAS to On premise.

1> Create Cloud Connector: Add the backend system

2> Create a Destination on the SAP BTP cockpit.

3> Make sure the BTP trial subaccount has the BAS subscription, ABAP environment added as an instance and also necessary roles.

SAP missions here helped the most

<https://developers.sap.com/mission.abap-env-trial-user.html>

<https://developers.sap.com/tutorials/abap-environment-deploy-cf-production.html>

Then ON Business Application Studio I had to add the Cloud Foundry Login. This allows the connection to be finally established.

For the Cloud Connector setup:

Get the Sub account from the Trial.

The screenshot displays the SAP BTP Cockpit interface for a subaccount overview. The left sidebar shows the navigation menu with options like Favorites & Recent, Subaccount, Overview, Services, Cloud Foundry, HTML5 Applications, Connectivity, Security, and Role Collections. The main content area is titled 'Subaccount: trial - Overview' and has tabs for General, Cloud Foundry Environment, Kyma Environment, and Entitlements. The 'General' tab is active, showing the following details:

- Tenant ID: 6d642e29-81f7-4dd6-9c19-c38e23ad04ea
- Subaccount ID: 6d642e29-81f7-4dd6-9c19-c38e23ad04ea
- Region: US East (VA) - AWS
- Beta Features: Disabled
- Environment: Multi-Environment
- Created By: [redacted]
- Created On: July 10, 2026, 5:58:05 PM GMT-04:00
- Modified On: July 10, 2026, 5:58:25 PM GMT-04:00
- Open in Audit Log Viewer [link]

The 'Cloud Foundry Environment' section shows:

- API Endpoint: https://api.cf.us10-001.hana.ondemand.com
- Org Name: 13c74403trial
- Org ID: b3931474-7919-4f6c-83e8-daba564826e2
- Org Memory Limit: 4,096MB

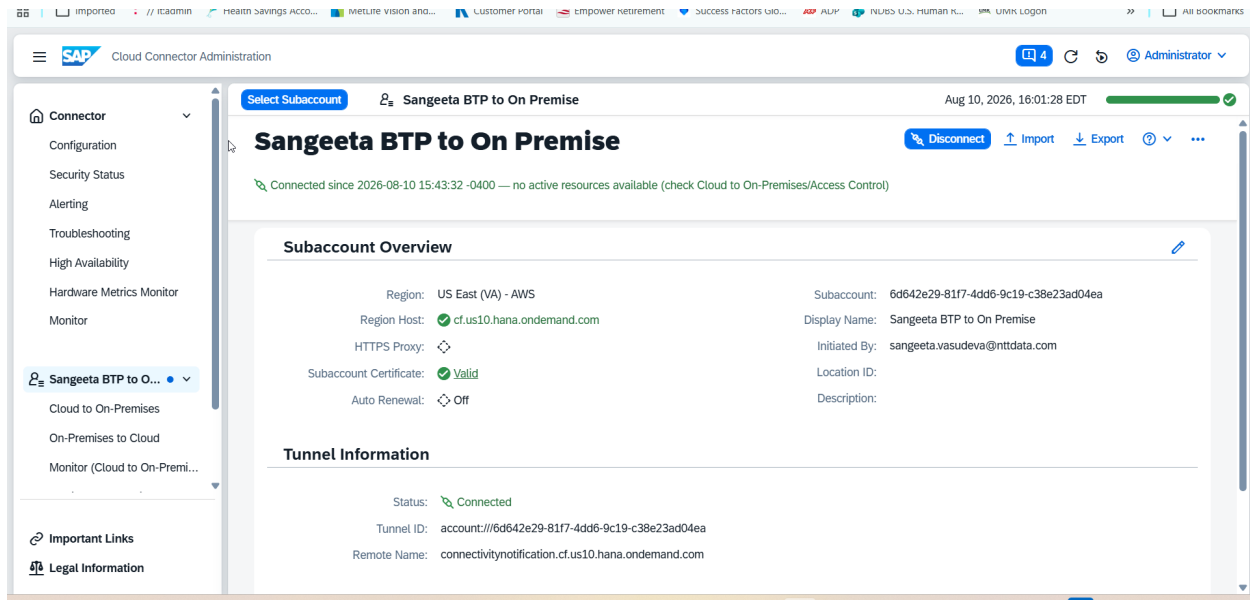

Access the cloud connector

RESTRICTED

Next Check Connection.

Now create a Destination to ON premise from BAS.

Log into Trial account, BAS.

RESTRICTED

The screenshot shows the SAP BTP Cockpit interface. The left sidebar contains a navigation menu with options like Overview, Services, and Cloud Foundry. The main area is titled 'Subaccount: trial - Instances and Subscriptions'. It shows a table of subscriptions for the trial subaccount. The table has columns for Application, Plan, Changed On, and Status. The 'SAP Business Application Studio' subscription is highlighted with a red box.

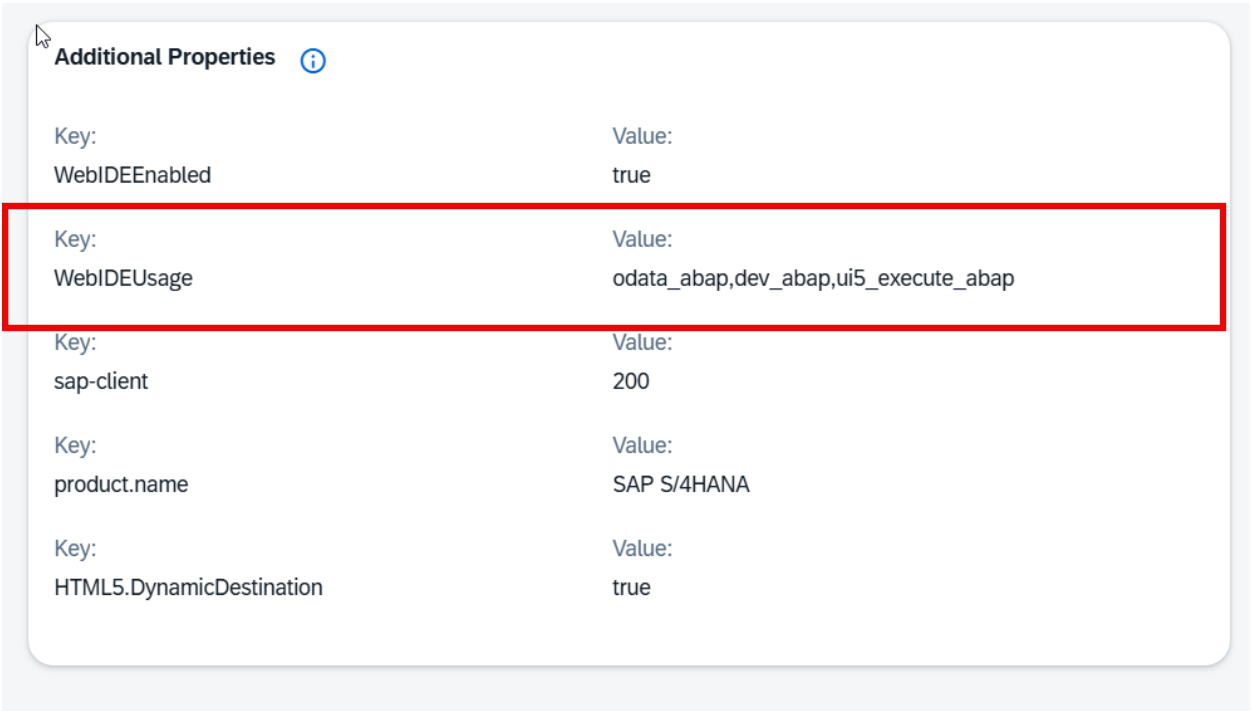

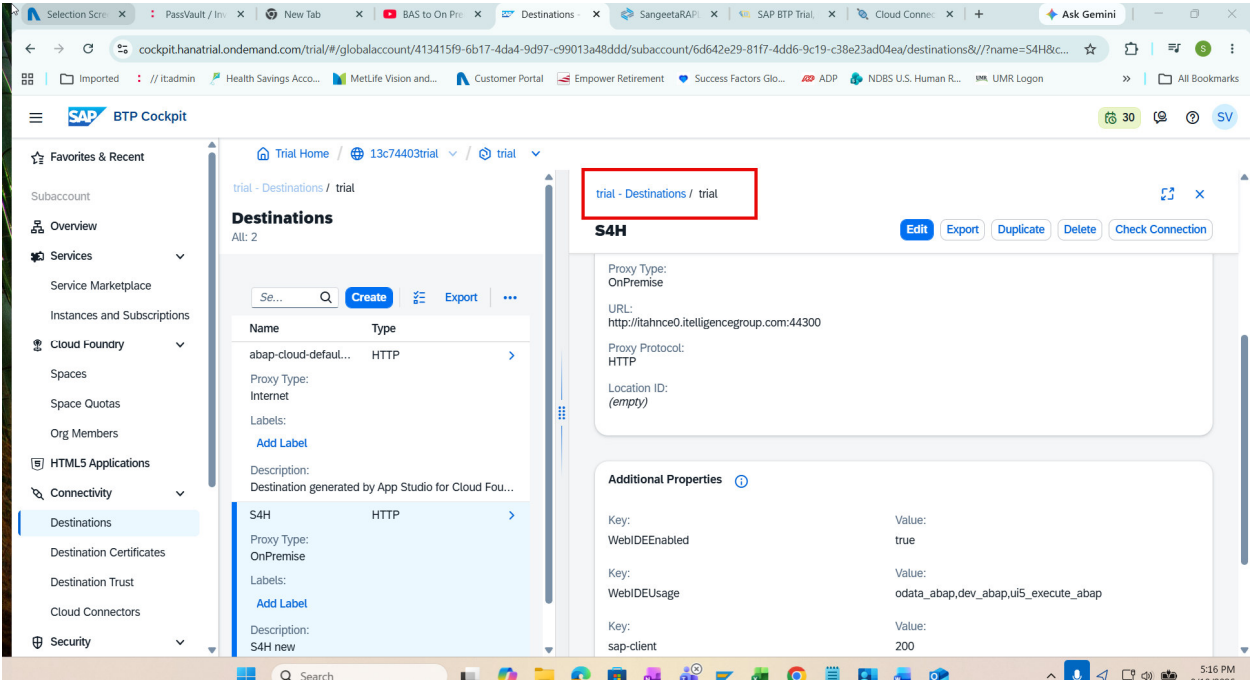

Application	Plan	Changed On	Status
SAP Dynamic Forms Trial	trial	Jul 24, 2026	Subscribed
SAP Build Apps	free	Jul 17, 2026	Subscription Failed
SAP Business Application Studio	trial	Jul 10, 2026	Subscribed

Now on BAS, Add a Service Center from Business Application Studio.

This will in turn add the Destination on the BTP cockpit. Now edit it and make sure WEB-IDE usage has the following added. Once all looks good, run check connection.

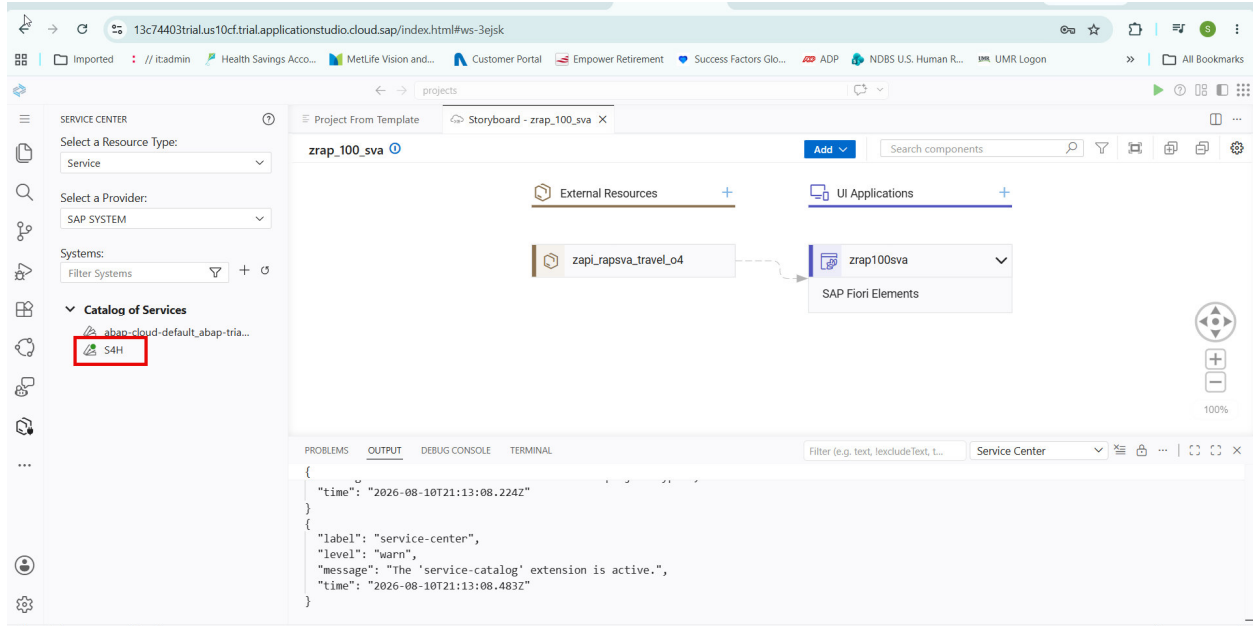

The screenshot shows the SAP BTP Cockpit interface with the 'Destinations' section selected. A table of destinations is displayed, with 'S4HNEW' highlighted. The 'S4HNEW' destination is of type 'HTTP'. A 'Check Connection' dialog box is open, showing the status 'Backend is reachable from the Cloud Connector.' and a 'Close' button.

Name	Type
abap-cloud-default...	HTTP
S4HNEW	HTTP

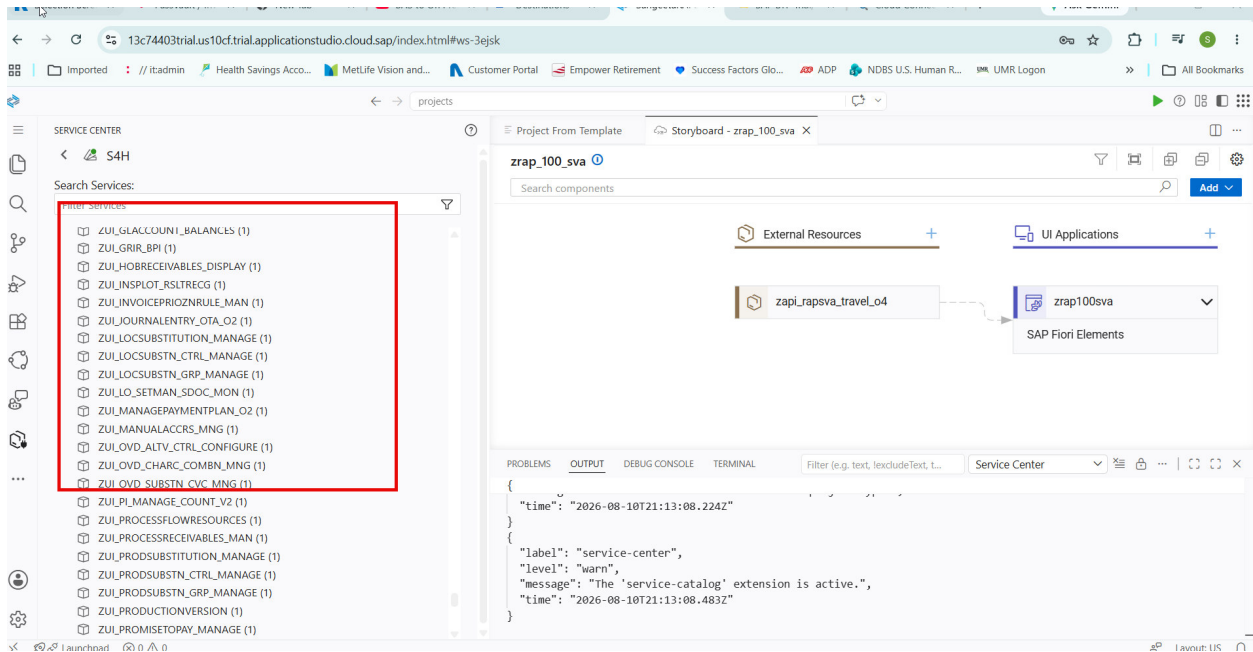

Now log back into SAP BAS

A green dot means system is connected.

All Services are now available.
